2. I have never participated in a project where I made a website in a big team or for a company. Our school projects make for good practice, but do I believe that I could have made a fully functional website in a week that would satisfy all the criteria's so I could present it for a campany that hired me? not yet. So, I had no idea of how long it would actually take and what recourses and staff would be needed. So much of the ideas were taken from the Gantt chart examples. In the beginning I only had 4 people working on the project. I didn't think more where needed, but I thought to myself ''Why would I limit the amount of people I could use in a project''. And this project was supposed to be finish in a month. So, I added a fifth person just to have a full ''staff''.

3.

4. Then I changed the biggest task, at the time was simply ''make the website'', from one task to many short tasks. to make it clearer what needed to be done at what time. Some tasks like making a movie where simplified because I have no real idea about how it would be done. I can think of ways, but would they be the optimal or even remotely possible? No idea. But the User Stories

was one that needed to be added. It had to be done.

2. Body
2.1 Introduction
I simply started thinking about what I have made so far. Home pages, about, contact and so on. Here I started with a broad ''plan'' or task called ''Make the website'' but at the end I simply looked at it and thought ''if I myself where to follow that plan, how would I, How could I?'' So, I made changes. I added a fifth person at the end to. I have no idea why I would limit a team that only had a one-month deadline.

I simply started thinking about what I have made so far. Home pages, about, contact and so on. Here I started with a broad ''plan'' or task called ''Make the website'' but at the end I simply looked at it and thought ''if I myself where to follow that plan, how would I, How could I?'' So, I made changes. I added a fifth person at the end to. I have no idea why I would limit a team that only had a one-month deadline.

Working with GitHub was new, I would even say it was exiting. But difficult. I will admit I am one of the spoiled ones that never work with a program that was based this much on commands and not buttons. That you had to chech with git status to see what files where added and changed. And not just have them visibly listed in a menu or window. And to give it a command to upload and not simply push a button. It was nice to see them physically on the website, no idea why I was so surprised by that, and to see that it worked. More so that I was doing it right.

The reason I chose to use excel as my Gantt chart was simply that I use both word and excel online so I have all my projects and school assignments in OneDrive now. This makes it easy to go from my laptop to my home computer and it gives me a safer space to store my school work.

Excel was something I already had experience with. It made it easy to choose excel. And the video from LinkedIn showed the use of it so that was also one of the reasons.

Gantt charts is something I think I will be using from now on, I am a person who really benefits from a routine and not just winging it. But I will need to be more comfortable with GitHub before I really make full use of it. Do I believe I will somehow destroy my hard driver lose everything, no. But I know it possible and would like to get ahead of such a problem.

2.3 Conclution

My biggest problem right now, except for the lack of real-life experience working on webpage, is that I have no idea how long it would take to make a website that I could present to a client. All I am basing this on is what the course assignment hinted at. Like max five people and the examples where one-month projects were presented. but this is also something I really look forward to finding out.
